NativeScript 7.0.8 Cli fixes

npm i -g nativescript

https://github.com/NativeScript/nativescript-cli/releases

* broad improvements to clean, migrate, run, etc.

Note on @NativeClass decorator

{N} 7 tip if using @NativeClass decorator on a single class in single file:

* native-class.ios.ts:

@NativeClass

export class YourImpl extends NSObject {

* Solution is to use a closure (this applies to Android as well):

NativeScript 7 - Plugin Seed Workspace

1. Download a zip of this repo: https://github.com/NativeScript/plugin-seed
2. Unzip and name the folder appropriately (perhaps the name of the npm scope you intend to manage here like `myscope` - typically this would be your npm username or your organization)
3. Setup workspace tooling: `npm run setup`
4. Configure your npm scope: `npm run config`
